

Sample Document for RAG Testing

Artificial Intelligence (AI) is the simulation of human intelligence in machines that are programmed to think and learn like humans. AI systems can perform tasks such as speech recognition, decision-making, language translation, and visual perception.

Machine Learning (ML) is a subset of AI that allows computers to learn from data without being explicitly programmed. ML algorithms identify patterns in data and use them to make predictions or decisions.

Deep Learning is a specialized area of machine learning that uses neural networks with multiple layers to analyze complex patterns in large datasets.

Natural Language Processing (NLP) enables computers to understand, interpret, and generate human language. Applications include chatbots, translation systems, and sentiment analysis.

This document can be used to test Retrieval Augmented Generation (RAG) systems. Try asking questions like: 'What is machine learning?' or 'What is NLP?'
